As setup is prepared (PC/Laptop is connected to the gateway using Micro USB, COMport slot is on the slot of the SIM Card, TeraTerm is installed and running), please follow these steps:

1. Navigate to **File → Click new connection**

2. Choose **Serial** as Connection type.

3. Choose correct COM port and click on the OK button.

4. Navigate to **Setup** -> **Serial port**

5. Change COM port to the desired and set baud rate to "**115200**"

6. Click OK to apply the new setup.

Procedure to delete gateway`s password:

1. Power cycle the gateway by unplugging the power cable and plugging it back.

2. Hit "Z" ('Shift+z' or turn on the Capslock and press 'z') when the "**Press 'Z' to stop autoboot**" message appears during bootup to stop the autoboot.

3. Execute the below command to boot into recovery partition:

    run recoveryboot

4. In recovery terminal run:

    recover

5. Then select option 4.

6. Type the command:

    passwd -d root

7. Type:

    exit

8. Run the command:

    reboot

At this moment, password is removed from the gateway.

To setup new password, use regular SSH connection via ssh root@ip.of.the.gateway

9. As connection with the gateway is established, execute the following command:

Passwd

Type new password. Confirm new password.
